

Asia Dragon Trust plc

Capturing growth from world-class Asian companies

Performance Data and Analytics to 31 December 2024

Strategic review

Following the conclusion of the strategic review conducted by the Board, on 28 October 2024 the Company announced proposals for a combination with Invesco Asia Trust. On 18 December the Company published a Circular which can be found on the Company website. The first General Meeting of shareholders to approve the proposed combination will take place on 4 February 2025.

Investment objective

The Company aims to achieve long-term capital growth principally through investment in companies in the Asia Pacific region, excluding Japan (the "Investment Region").

Benchmark

MSCI AC Asia ex Japan Index. This benchmark excludes Japan, Australia, New Zealand and Sri Lanka.

Cumulative performance (%)

	as at 31/12/24	1 month	3 months	6 months	1 year	3 years	5 years	Since 1/9/21 ^A

Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information. Past performance is no guarantee of future results. For more detailed information about Morningstar's Analyst Rating, including its methodology, please go to: <http://corporate.morningstar.com/us/documents/MethodologyDocuments/AnalystRatingforFundsMethodology.pdf>. The Morningstar Analyst Rating for Funds is a forward-looking analysis of a fund. Morningstar has identified five key areas crucial to predicting the future success of a fund: People, Parent, Process, Performance, and Price. The pillars are used in determining the Morningstar Analyst Rating for a fund. Morningstar Analyst Ratings are assigned on a five-tier scale running from Gold to Negative. The top three ratings, Gold, Silver, and Bronze, all indicate that our analysts think highly of a fund; the difference between them corresponds to differences in the level of analyst conviction in a fund's ability to outperform its benchmark and peers through time, within the context of the level of risk taken over the long term. Neutral represents funds in which our analysts don't have a strong positive or negative conviction over the long term and Negative represents funds that possess at least one flaw that our analysts believe is likely to significantly hamper future performance over the long term. Long term is defined as a full market cycle or at least five years. Past performance of a security may or may not be sustained in future and is no indication of future performance. For detailed information about the Morningstar Analyst Rating for Funds, please visit <http://global.morningstar.com/managerdisclosures>.

Morningstar Analyst Rating™

© Morningstar Analyst Rating™

Morningstar analysts assign the ratings globally on a five-tier scale with three positive ratings of Gold, Silver and Bronze.

Morningstar Sustainability Rating™

Morningstar Rating™

© Morningstar Rating™ for Funds

Morningstar rates funds from one to five stars based on how well they've performed (after adjusting for risk and accounting for all sales charges) in comparison to similar funds.

Fund managers' report

Market and portfolio review

Asia ex Japan equities rose in sterling terms in December, outperforming most other regions which were impacted by cautious investor sentiment in the run-up to US President-elect Donald Trump's inauguration on 20 January and the potential impact of tariff policies. Sentiment was also dampened by the US Federal Reserve's more hawkish stance for 2025 despite delivering a 25bps cut. The Fed indicated that interest rates are likely to be 'higher for longer', driven by renewed inflation concerns. Rate cut expectations were dialled back to two cuts next year, down from four in September.

Taiwan led the region in gains, buoyed by a good showing from tech supply names. Delta Electronics was a position we had added in recent months. We thought that the market was undervaluing the company's structural growth from the upgrading of data centres driven by rapid AI development and the need for cloud computing. This was based on Delta's market leadership in the power supply business, given the power supply would need to be upgraded with each subsequent iteration of more powerful chips and servers. Accton Technology was another AI beneficiary, given its exposure to datacentre switches and AI accelerators.

Chinese equities rebounded on the back of onshore buying and a strong information technology sector, with the country's equity market posting its first annual gain in three years. That said, December proved volatile for the Chinese market due to anticipation around the Central Economic Working Conference (CEWC) and the government's policy and stimulus plans. During both the December politburo and CEWC, the government reiterated its pro-growth stance, shifting monetary policy from prudent to moderately easing, prioritising consumption in 2025 over high-tech manufacturing, and maintaining the call for property market stabilisation. Among our holdings, China Merchants Bank, Tencent and Trip.com performed well. In corporate news, Meituan published solid results, driven mainly by strong food delivery profitability. While there could be a moderation in food delivery growth, company fundamentals remain

^c Represents the individual country returns calculated using the MSCI Index Series (£). Market change is total return in GBP.
^d Expressed as a percentage of average daily net assets for the year ended 31 August 2024. The Ongoing Charges Figure (OCF) is the overall cost shown as a percentage of the value of the assets of the Company. It is made up of the Annual Management Fee and other charges. It does not include any costs associated with buying shares in the Company or the cost of buying and selling stocks within the Company. The OCF can help you compare the annual operating expenses of different Companies.

Fund managers' report – continued

robust. Meituan's investment in Keeta may lead to a loss in the near term but could create good return and growth upside in the long run. Contemporary Amperex Technology was considering a Hong Kong listing, with the aim to raise at least US\$5 billion (£4 billion). The secondary listing could happen as early as the first half of 2025, subject to changes in plans and regulatory approval. The company also entered a joint venture with Stellantis to construct a new Lithium Iron Phosphate (LFP) battery plant in Spain.

South Korea was the main laggard over the month amid political turmoil and a weak currency. Australian equities also fell to a larger degree than their peers as they tracked the sell-off in US equities, as well as sticky inflation, which prompted the Reserve Bank of Australia to leave interest rates unchanged.

In terms of ESG engagement, we discussed BHP's recently published 2024 Climate Transition Action Plan (CTAP) report and gave our feedback on abrdn's voting position on Say on Climate votes ahead of the 2024 Annual General Meeting. Furthermore, we exchanged our views on BHP's capital expenditure towards decarbonisation, pathway routes to decarbonising its downstream emissions, integrity of the use of renewable energy certificates versus power purchase agreements, and the use of carbon offsets.

In trading activity, we initiated a position in Coforge. Indian-based Coforge is a mid-sized, niche IT services company with deep domain expertise in three industry verticals – banking and financial services, insurance, and travel, transport and hospitality – where it has the capability and track record of going head-to-head against Tier-1 competitors.

Conversely, we exited ASM International, Cholamandalam Investment and Finance, Global Health, Kweichow Moutai, Sumber Alfaria Trijaya (Alfamart) and Yageo Corporation in view of better opportunities elsewhere.

Outlook

Sentiment appears volatile around Asia over the short term, given the looming inauguration of Donald Trump as US President and what that might mean in terms of tariff risks, especially for China. The implications of Trump 2.0 for the broader region are complex. Trump is likely to drive uncertainty and volatility, which could create opportunities for long-term investors. Higher tariffs and trade barriers are expected, hurting China and prompting aggressive domestic growth efforts. Export markets may face pressure from higher tariffs and limited US rate cuts. Geopolitical tensions remain challenging, with potential shifts in Asia if Trump follows his first-term playbook. This period of change and volatility will affect multiple fronts. However, Asia's diversity means the entire region should not be painted with a broad brush. Economies like India, driven largely by domestic factors, may benefit from supply diversification away from China, which also benefits the ASEAN region. Intra-regional trade remains strong, and Asia lacks the macro imbalances seen in the West, ensuring resilience and growth. Quality companies should remain well-positioned.

^E Calculated using the Company's historic net dividends and month end share price.

^F Net gearing is defined as a percentage, with net debt (total debt less cash/cash equivalents) divided by shareholders' funds.

^G The 'Active Share' percentage is a measure used to describe what proportion of the Company's holdings differ from the benchmark index holdings.

^H Includes current year revenue.

The risks outlined overleaf relating to gearing, exchange rate movements and emerging markets are particularly relevant to this trust but should be read in conjunction with all warnings and comments made.

Important Information

The Statement of Operating Expenses is designed to help investors understand the impact of operating expenses on financial performance.

Operating expenses are NOT deducted from the value of an investor's shareholding, which is derived from the share price.

The market value (share price) of all publicly traded companies reflects a wide range of factors, including the estimated impact of operating expenses on future financial performance.

The market value of an investment trust may diverge materially, both positively and negatively, from the reported net asset value.

Important information

Risk factors you should consider prior to investing:

- The value of investments, and the income from them, can go down as well as up and investors may get back less than the amount invested.
- Past performance is not a guide to future results.
- Investment in the Company may not be appropriate for investors who plan to withdraw their money within 5 years.
- The Company may borrow to finance further investment (gearing). The use of gearing is likely to lead to volatility in the Net Asset Value (NAV) meaning that any movement in the value of the company's assets will result in a magnified movement in the NAV.
- The Company may accumulate investment positions which represent more than normal trading volumes which may make it difficult to realise investments and may lead to volatility in the market price of the Company's shares.
- Movements in exchange rates will impact on both the level of income received and the capital value of your investment.
- There is no guarantee that the market price of the Company's shares will fully reflect their underlying Net Asset Value.
- As with all stock exchange investments the value of the Company's shares purchased will immediately fall by the difference between the buying and selling prices, the bid-offer spread. If trading volumes fall, the bid-offer spread can widen.
- The Company invests in emerging markets which tend to be more volatile than mature markets and the value of your investment could move sharply up or down.
- Yields are estimated figures and may fluctuate, there are no guarantees that future dividends will match or exceed historic dividends and certain investors may be subject to further tax on dividends.
