

MyPortfolio Select SMA

Portfolio V – Quarterly Update

Q4 2022

MyPortfolio Select Separately Managed Account (SMA) Portfolio V aims to generate growth over the longer term through an optimal combination of investment styles and managers.

Key Facts

Our SMA risk scale*:

Risk profile

The investment strategy for Portfolio V seeks to provide growth over the longer term while being managed to a level of risk, rather than a level of return. It aims to deliver a high level of return over the longer term but clients should be prepared to accept fluctuations in value of similar size and frequency to those experienced by equity markets. This may mean sustained periods of negative performance.

It's likely to be suitable for clients who are prepared to accept a higher level of risk over the term of their investment. abrdn believes this may apply to clients who are prepared to accept a significant level of volatility over their time horizon. They accept that this may increase the risk of greater fluctuations in the value of their investments.

Remember, investors could get back less than they invested.

- Suitable for investors with basic investment knowledge.
- Suitable for investors who can accept large short term losses.
- Suitable for investors seeking to grow their assets over a period of at least 5 years, with easy access to their cash.

- Suitable for investors who are looking to invest in a standalone portfolio.
- Only suitable for clients who have received a recommendation from an adviser.

Investment strategy

The MyPortfolio Separately Managed Account service gives clients access to their investment portfolio construction and risk management skills.

In the initial stages of the investment process, the investment manager decides on the strategic asset allocation that they believe will deliver the best possible returns for a given risk level. We work closely with our colleagues with expertise in long-term asset class research, portfolio optimisation and risk modelling to achieve this. This process helps us build the most efficient long-term asset allocation mix that we expect to generate the highest returns for each level of risk.

This analysis forms a framework for the investment manager to select the right investment funds to fill the asset class buckets, utilising a combination of defensive and growth assets and investment styles particular to each MyPortfolio range. They implement an agile approach to fund selection by blending these funds optimally with the aim of achieving the best risk-adjusted returns.

The portfolios are regularly rebalanced and reviewed to ensure they are meeting the appropriate risk and return outcomes for investors. This involves checking that each portfolio has the optimal mix of assets and funds for its risk level and remains aligned to client needs. We make any necessary changes as quickly and cost-efficiently as possible.

Multi-Manager Strategies Team

Daniel Reynolds Investment Manager

Daniel is an Investment Manager responsible for co-managing MyPortfolio SMAs. Prior to joining the the Multi-Manager Strategies team at the end of 2013, he worked for the company as a Private Client Manager for 13 years.

Justin Jones Senior Investment Manager

Justin Jones is a Senior Investment Manager responsible for co-managing MyPortfolio SMAs and other institutional mandates. Justin has over 25 years of investment experience having joined the company in 2009 from Credit-Suisse Asset Management.

Market review

Global equities rose in aggregate over the fourth quarter of 2022. Early in the quarter, equities rebounded from falls earlier in the year. This performance was driven by the expectation that the US Federal Reserve (Fed) would slow the pace of rate increases, as US inflation was decelerating. However, global equities fell in December, as investors grew concerned about the slowing global economy, the possibility of a recession and rising cases of Covid-19 in China.

The Fed, the Bank of England (BoE) and the European Central Bank (ECB) all raised interest rates twice over the quarter, by 75 basis points (bps) and 50 bps. The 50 bps rate rises marked a deceleration in the pace of monetary tightening, but all three central banks stressed that further action would be needed to moderate high inflation.

*Please note that the risk class is an internal risk rating and that even the lowest risk class can lose you money.

Performance

Portfolio performance is based on abrdrn SMA hosted on the abrdrn WRAP platform.

Performance figures are net of the abrdrn Discretionary Management Charge. However they do not include the deduction of product and adviser specific charges. The effect of these charges would be to reduce the performance levels shown.

MyPortfolio Select SMA Portfolio V - Performance

	Performance (%) 4th Quarter 2022	Performance (%) 1 year	Performance (%) Since Inception ¹
MyPortfolio Select SMA Portfolio V	4.90	-5.30	5.56

The performance figures may vary due to product specific charges and should be viewed on an indicative basis.

DFM charge	0.30%
Underlying fund costs*	0.565%
Total estimated cost	0.865%

*Estimate based on portfolio at end December 2022 (subject to change)

Market outlook

Global equity markets will continue to face challenges in 2023. Investors are now concerned that entrenched inflation and sustained rate hikes could result in a harsh economic downturn. We believe that many of the market pressures in 2022, such as high energy prices, the cost-of-living crisis and rising interest rates, will continue.

In fixed-income markets, although the Fed, the BoE and the ECB raised rates by 50 bps rather than 75 bps at their last meetings, they stressed that further action is required. Fed chair Powell stated that "ongoing hikes will be appropriate". ECB president Lagarde confirmed that investors could expect rate rises "at a 50-basis-point pace for a period of time". In the UK, we believe the BoE could raise rates to 4.5% next year before it begins to cut rates in the second half.

This factsheet does not provide individually tailored advice. It has been prepared without regard to individual financial circumstances and objectives of persons who receive it. We recommend that investors seek the advice of a financial adviser. The appropriateness of a particular portfolio will depend on an investor's individual circumstances and objectives. Investors should remember that the value of investments and the income from them can go down as well as up and that past performance is not a guarantee of future returns.
