

31 March 2020

The SL ASI Global Inflation-Linked Bond Pension Fund invests primarily in the ASI Global Inflation-Linked Bond Fund. The aim of the ASI Global Inflation-Linked Bond Fund is summarised below.

The fund aims to provide long term growth from a combination of income and capital growth by investing predominantly in sovereign-issued and corporate inflation-linked bonds. The fund is actively managed by our investment team who may also invest in other bonds (such as conventional government bonds and corporate bonds) to try to take advantage of opportunities they have identified. Non-Sterling denominated assets will typically be hedged back to Sterling.

The value of investments within the fund can fall as well as rise and is not guaranteed – you may get back less than you pay in. The fund may use derivatives for the purposes of efficient portfolio management, reduction of risk or to meet its investment objective if this is permitted and appropriate. The Sterling value of overseas assets held in the fund may rise and fall as a result of exchange rate fluctuations.

Note: The information shown relates to the past. Past performance is not a guide to the future. The value of your investment can go down as well as up. For the relevant charges on your policy please refer to your policy documentation.

Definitions

Volatility Rating (0-7) - The volatility rating of a fund indicates how much the fund price might move compared to other funds. The higher the volatility rating, the less stable the fund price is likely to be. You can use this to help you decide how much risk you're comfortable taking with your investments. Volatility ratings are calculated on a scale of 0-7.

Duration - gives an indication of a bond's sensitivity to a change in interest rates. It is based on a snapshot of the portfolio on specified date. It does not include any impact from charges.
