

Summary

The Global Corporate Sustainable Bond Fund seeks to deliver long-term performance by allocating capital to companies which demonstrate strong management of their environmental, social and governance (ESG) risks and opportunities.

The portfolio is underpinned by our well-established active management approach of security selection tailored to the overall environment, which combines fundamental and ESG considerations into our individual name, sector and top down portfolio construction decisions. An assessment of a company's sustainability is supported by proprietary company rating models and a deeply embedded ESG framework utilising on-desk Fixed Income and central ESG resources.

The Fund is classified under SFDR as Article 8 and therefore promotes Environmental & Social characteristics and investments follow good governance practices.

The Fund will:

- Target at least a 15% reduction of the benchmark investable universe by excluding companies identified as not having sustainable business practices. This is achieved through a set of exclusions, which identify controversial business activities and ESG laggards i.e. companies rated poorly based on their management of ESG risks within their business.
- Engage with companies to gather a forward-looking insight into management of ESG risks, opportunities and actively influence the management of these factors in line with best practice standards.
- Target an equal or better ESG score compared to the benchmark.
- Target at least a 10% lower carbon intensity than the benchmark.

The Investment Framework

The Fund seeks to:

- Generate consistent risk-adjusted outperformance using our active management approach of stock selection tailored to the overall environment.
- Benefit from our active engagement with companies, where we encourage positive changes in corporate behaviour.
- Construct a portfolio that invests in companies with strong Environmental, Social and Governance practices.
- Leverage the support and insights of our large, dedicated Fixed income team and embedded ESG specialist resources.

ESG Assessment Criteria

The Fund uses a number of ESG Assessment Criteria:

ESG Laggards

The Fund excludes companies rated poorly based on their management of ESG risks within their business. This is drawn from the insights of our credit analysts and central ESG investment function. In this regard we utilise two proprietary models to screen the investment universe:

ESG Risk Rating

Our credit analysts apply an ESG Risk Rating of Low, Medium, High (Low is better) to each issuer. This is credit profile-specific and represents how impactful we believe ESG risks are likely to be to the credit quality of the issuer now and in the future. The key area of focus is the materiality of the inherent Environmental and Social risks of the sector of operation (e.g. extraction, water usage, cyber security) and how specific companies manage these risks, combined with the quality and sustainability of its corporate governance. This materiality assessment is combined with a judgement on the timeframe over which these ESG risks may have an impact. Our analyst utilises an ESG Risk Rating Framework to support making these assessments. This is a proprietary tool designed to help focus the knowledge and expertise of credit analysts in a systematic way to substantiate the overall ESG Risk Rating (low/medium/high) assigned to debt issuers.

The Fund will exclude companies with a High ESG Risk Rating.

ESG House Score

Our proprietary ESG House Score, developed by our central ESG investment team in collaboration with the Quantitative investment team, is used to identify companies with potentially high or poorly managed ESG risks. The score is calculated by combining a variety of data inputs within a proprietary framework in which different ESG factors are weighted according to how material they are for each sector. This allows us to see how companies rank in a global context.

The abrdn ESG House Score was designed so that it can be broken down into specific themes and categories. The ESG score comprises of two scores; the Operational score and Governance score. This allows a quick view of a company's relative positioning on its management of ESG issues at a granular level.

- The Governance score assesses the corporate governance structure and the quality and behaviour of corporate leadership and executive management.
- The Operational score assesses the ability of the company's leadership team to implement effective environmental and social risk reduction and mitigation strategies in its operations.

To complement this, we also utilise our active stewardship and engagement activities.

The Fund excludes companies with the highest ESG risks, as identified by the ESG House Score. This is implemented by excluding the bottom 10%¹ of issuers with an ESG House Score that are in the benchmark. The ESG House Score associated with the bottom 10% will be the hurdle rate portfolio holdings will have to be higher than, to be considered for investment.

¹ State Owned Entities (SOEs), Asset Backed Securities (ABS) & Collateralised Loan Obligations (CLOs) are excluded from the bottom 10% calculation. This is due to lower levels of disclosure resulting in inaccurate scores or not enough information to generate a score. Please note SOEs, ABS & CLOs are still captured by all of the other sustainability screens i.e. the Controversial Business Actives and the Credit ESG Risk Rating.

Portfolio Commitments

Performance

To measure financial performance, the Fund's reference index is the Bloomberg Barclays Global Aggregate Corporates Index. The Fund aims to outperform the index before charges. While the index is representative of the investment opportunities we explore for the fund, the index is not constructed using any environmental or social criteria.

Portfolio ESG rating v.s. the benchmark²

As a feature of the portfolio construction decisions, portfolio managers will target a weighted average ESG House score equal to or better than the benchmark.

Carbon Footprint

The Fund will target a Carbon Intensity that is at least 10% lower than the benchmark as measured by the abrdn Carbon Footprint tool (which uses Trucost data for Scope 1&2 emissions)³. This tool enables analysis of company, sector and the overall portfolios carbon footprint.

Sustainable Investments

The SFDR provides a general definition of "Sustainable Investment". This definition applies to Funds which have a sustainable investment objective. In addition, Article 8 Funds may also set a minimum proportion of Sustainable Investments but they do not have a specific sustainable objective. This Fund makes a commitment to a minimum proportion in Sustainable Investments of 15%.

In line with the SFDR definition, abrdn has developed an approach on how to satisfy the three criteria for Sustainable Investments in the relevant Funds as set out below. The three criteria are:

1. **Economic Contribution** - The economic activity makes a positive contribution to an environmental or social objective.
2. **No Significant Harm** - The investment does not cause Significant Harm ("Do No Significant Harm"/"DNSH") to any of the sustainable investment objectives.
3. **Good Governance** - The investee company follows good governance practices.

If the investment passes all of the above three tests, it can then be deemed as a Sustainable Investment. Additional information on the Article 8 approach to making Sustainable Investments is detailed in the SFDR Annex, appended to the fund prospectus.

² ESG House Score and Carbon Footprint calculations exclude instruments with no data and therefore excludes Cash, Government Bonds and Derivative Holdings for the portfolio.

³ Our current approach is to consider Scope 1, 2 and 3 emissions at company and sector level. We use Scope 1 and 2 emissions for calculating the portfolio's carbon footprint in order to avoid double counting and data inconsistencies as recommended by TCFD.

Exclusions and Restrictions Criteria

The investment universe is screened to exclude companies with poor ESG business practices. This is achieved through a set of exclusions, which identify controversial business activities and ESG laggards (detailed above). We use negative criteria to avoid investing in certain industries and activities that our customers are concerned with. The Fund avoids investing in areas that are set out in the table below.

For more details please visit our website at www.abrdn.com under "Sustainable Investing" where we have position statements on various ESG-related issues.

Screen	Criteria The Fund excludes investments that:	Data Source
UN Global Compact	Fail to uphold one or more principles ⁴ .	We utilise a combination of external data sources, including MSCI and our own internal research and insights, as well as sustained engagement.
State-Owned Enterprises⁵	Are state-owned enterprises in countries subject to international sanctions or that materially violate universal basic principles.	We utilise a combination of external data sources, including MSCI and our own internal research and insights.
Controversial Weapons	Have any tie to controversial weapons ⁶ covering; cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers.	MSCI
Conventional weapons	Have a revenue contribution of 5% or more from conventional weapons. ⁷	MSCI
Tobacco	Have a revenue contribution of 5% or more from tobacco wholesale trading or are tobacco manufacturers ⁸ .	MSCI

⁴ Ten Principles of the UN Global Compact <https://www.unglobalcompact.org/what-is-gc/mission/principles>

⁵ As part of the research, we examine a number of environmental, social, governance and political (ESGP) factors within our research. Our ESGP framework rates countries on 18 indicators across the four pillars – environmental, social, governance and political. The ESGP scores provide useful information for identifying long-term factors and tendencies that might not be fully factored into sovereign bond spreads.

⁶ https://www.msci.com/eqb/methodology/meth_docs/MSCI_Global_ex_Controversial_Weapons_Indexes_Methodology_Nov2019.pdf

⁷ The UN Programme of Action on Small Arms and Light Weapons (PoA) and the Arms Trade Treaty (ATT).

⁸ This is supported by the MPOWER strategy developed in 2007 by the WHO to cut tobacco use and raise taxes on tobacco products.

Thermal Coal	<p>Have a revenue contribution of 5% or more from thermal coal extraction.</p> <p>and/or</p> <p>Have a revenue contribution of 5% or more from thermal coal power generation unless identified as a 'Transition Focused Company' (see below).</p> <p>and/or</p> <p>Are directly investing in new thermal coal capacity in their own operations.</p>	MSCI, investment research
Unconventional Oil & Gas Extraction	Have a revenue contribution of 5% or more from unconventional oil and gas extraction.	MSCI
Conventional Oil & Gas⁹	Are primarily involved in conventional oil and gas extraction and do not have a significant revenue (at least 40%) contribution from natural gas or renewable alternatives unless identified as a 'Transition Focused Company' (see below).	MSCI, investment research
Electricity Generation and alignment with Transition Pathway	Are directly involved in electricity generation which has a carbon emission intensity inconsistent with the Paris Agreement 2 degrees scenario unless identified as a 'Transition Focused Company' (see below).	Trucost, MSCI

The above sets out the screens that are applied for this Fund. We cannot exhaustively list screens that are not applied and it is important for investors to be clear that the interpretation of ESG and sustainability criteria is subjective, meaning that the Fund may invest in companies which do not align with the personal views of individual investors.

Environmental screens and Transition Focused Companies methodology details

Environmental screens:

For all the environmental screens an exemption will be made for Labelled bonds including Green, Social, and Sustainable. This does not extend to Sustainability-linked bonds. This approach will only apply to an individual bond and not the issuer in its entirety.

Each bond considered needs to clearly evidence that the proceeds of the financing are going towards improving environmental or social impacts and also pass our own internal labelled bond framework.

Transition Focused Companies:

To successfully support the energy transition, companies in higher emitting sectors including Oil & Gas and Utilities will require capital to invest and change their operations. The aim of the Transition Focused approach is to distinguish between companies with ambitious and credible targets to decarbonise their operations and those that don't. Each entity considered would need to demonstrate that they were on track to be compliant with the relevant ESG criteria by 2030 for Developed markets and 2040 for Emerging markets. This is to be determined by a formalised review process with milestone tracking.

⁹ https://www.febelfin.be/sites/default/files/2019-02/quality_standard_-_sustainable_financial_products.pdf

A maximum of 10% of the portfolio can be invested in a combination of labelled bonds generating exemptions from environmental screens and Transition Focused Companies. Of the 10%, no more than 5% can be exposure to Transition Focused Companies.

Investment in financial derivative instruments, money market instruments and cash may not adhere to this approach.

Active Stewardship

Active Ownership

In our view, good governance and stewardship are vital to safeguard the way in which a company is managed and to ensure that it operates responsibly in relation to its customer, employees, shareholders, and the wider community. We also believe that markets and companies which adopt best practices in corporate governance and risk management – including the management of environmental and social risks – are more likely to deliver sustainable, long-term investment performance.

As owners of companies, the process of stewardship is a natural part of our investment approach as we seek to benefit from their long-term success on our clients' behalf. Our fund managers and analysts regularly meet with the management and non-executive directors of companies in which we invest.

ESG Engagement

Engagement with company management teams is key and a standard part of our equity investment process and ongoing stewardship programme. It provides us with a more holistic view of a company, including current and future ESG risks that the firm needs to manage and opportunities from which it may benefit. It also provides the opportunity for us to discuss areas of concern, share best practice and drive positive change. Priorities for engagement are established by:

- The use of the ESG House Score, in combination with
- Bottom-up research insights from investment teams across asset classes, and
- Areas of thematic focus from our company level stewardship activities.

Stock Lending

abrdn ESG funds take part in our Stock Lending programme, details of which can be found in the prospectus. Collateral held on behalf of ESG funds is currently restricted to Government bonds and securities issued by constituents of the MSCI ESG Screened indices; further detail on these indices can be found at <https://www.msci.com/esg-screened-indices>.

Divestment Approach

Disinvestment from an issuer is required:

- If they become in breach of any of the exclusions. OR
- If their ESG Risk Rating moves to "High". OR
- If they no longer meet the ESG House Score hurdle.

Should the review of a security result in it being deemed non-compliant, the intention would be exit as soon as is practicably possible, but generally never longer than 3 months, allowing for market conditions.

Additional Disclosures

For further information about the Fund, including the prospectus, annual report and accounts, half-yearly reports, the latest share prices, or other practical information, please visit www.abrdn.com where documents may be obtained free of charge.
